Why Career Education?

Students at Inland Empire/Desert region community colleges are gaining the state-of-the-art skills they need to level up their paychecks and their lives.

With middle-skill jobs now making up the largest part of the US labor market, there has never been a better time to lock in a future-ready career education.

Career education programs are located throughout the San Bernardino and Riverside County and Desert regions, offering flexible class schedules at a fraction of the cost of public and private vocational schools.

Progress Ready

What will the future look like? Ask someone who's helping shape it today.

Imagination meets precision in engineering and architecture. Professionals in this field turn bold ideas into real-world solutions that are grounded in science, powered by technology, and driven by creativity. Their work is so essential that opportunities in this sector remain strong even when the economy is not.

Students who pursue a STEM career become the visionaries and problem-solvers behind the physical and digital worlds of the future. They design the structures we live in, the systems we rely on, and the innovations that move society forward. They also play key roles in laboratories, research facilities, testing environments, and development teams that push scientific and technological boundaries.

California has the largest STEM workforce in the nation, with more than a million professionals who are building what comes next.

An education with
more hire power.
